

# Is There Something Fishy About Your Water?

Living in Texas is great. Living in the Hill Country is even better, but our beautiful slice of Texas is hard on water. Lots of iron and other minerals cause our tap water to be a bit on the smelly side and rough on appliances and pipes. That's where Whitakers Soft Water can help. We have been servicing the Hill Country and the surrounding area for over 30 years, so we know how to get rid of smelly, hard water. We install and service water softeners, reverse osmosis and water purification and filtration systems. Call us today at **830.249.8578** and we'll take care of that fishy smell and get your water smelling and tasting fresh again.
